

INSTRUCTIONS FOR EXHIBITORS, SERVICE PROVIDERS AND STAND CONSTRUCTORS

When setting up, testing and operating pressure vessels or compressed gas vessels, the industrial Safety Regulation (Betriebssicherheitsverordnung [BetrSichV]) shall be observed.

Pressure vessels may only be operated on the stand if the required inspections have been carried out in accordance with the current valid version of the Industrial Safety Regulation. The necessary approval certificates shall be kept on hand for inspection by regulatory agencies during the event.

In addition to the submission of certifications of structural and hydrostatic pressure testing (EC declaration of conformity and required documentation in German or English), on-site approval is also required.

If applications are received up to 6 weeks prior to the start of the fair, pressure vessels subject to inspection may undergo an acceptance test at the stand by the German Technical Inspection Association [TÜV] up to one day prior to the opening of the fair. A person responsible for the pressure vessel must be present at the stand. Inquiries regarding same should be addressed to Messe Frankfurt, Technical Event Management, e-mail: veranstaltungstechnik@messefrankfurt.com.

The Technical Guidelines (5.6.3) are to be taken into account.
