

Information on short-term frequency Use

(NLS, 24h Rennen, 24h Qualifikationsrennen, RCN, Truck GP, GT Series, Oldtimer-GP)

In accordance with section 91 of the Telecommunications Act (TKG) of 01 December 2021 (Federal Law Gazette I page 1580), each frequency usage requires prior frequency assignment. Unless a general frequency assignment has been issued, the Federal Network Agency for Electricity, Gas, Telecommunications, Posts and Railway (**Federal Network Agency**) issues individual assignments. Where frequencies are to be used for a short time only, eg for car races, sports events, concerts and trade fairs, assignments are issued as short-term frequency assignments.

in the case of the short-term use of frequencies, the risk of harmful interference cannot be ruled out or individual assignment is necessary in order to secure the efficient use of frequencies. The short-term use of frequencies is therefore coordinated with other frequency usages.

The application form available on the Bundesnetzagentur's website can be used. Applications submitted without using the form must include at least the following information:

- address, telephone number and email address of the applicant (fee payer)
- name and telephone number of a contact on location
- purpose/name of event
- assignment area/location description
- size of assignment area/coverage radius around the transmitting equipment location
- event location/transmitting equipment location (if applicable/available WGS84 geographic coordinates)
- usage period (start and end of use)
- individual days of use, if no consecutive period of days
- usable (programmable) frequency range of the equipment operated
- preferred frequency/frequencies
- bandwidth (kHz/MHz) according to Radio Regulations No 1.153
- maximum transmitter output power (W/mW or dBW/dBmW)
- maximum antenna gain (dB)
- antenna height (above ground level) (m)
- description of the frequency usage (for example wireless microphone, wireless camera, speech, data or video transmission).

Any further information required to secure efficient and interference-free frequency use will be requested from the applicant.

Applicants are requested to submit their applications no later than 15 days before the planned start of use. Timely assignment cannot be guaranteed if applications are submitted later, in particular if frequencies are planned to be used close to borders with neighbouring countries.

Attention is drawn to the fact that the assignment fees for applications that the Bundesnetzagentur receives less than 15 days before the first day of use (based on the receipt stamp for postal applications and the date of receipt in the central email inbox for email applications) are higher, the later the applications are received.

A short-term frequency assignment is granted for a maximum of 30 consecutive days.

If you use frequencies without a valid frequency assignment, under Section 228 of the Telecommunications Act this may be punishable by a fine not exceeding **€ 500.000**.

Applications for short-term frequency use have to be submitted to the following Federal Network Agency offices:

Applicants should contact the local Federal Network Agency regional office responsible for the location of operation of the radio equipment (trade fair compound, concert hall, etc.).

Federal Network Agency Eschborn can be contacted under the following address:
